November 20, 2024

Nonprofit Tax Exemptions: A Submerged State Policy

- Nonprofit sectors have historically benefited from significant tax exemptions
  - The annual federal tax benefit for nonprofits is estimated at $45 billion, making up 2% of total federal tax revenue (Brody & Cordes, 2006)
  - Nonprofit colleges receive an estimated annual tax exemption of $22 billion (Baum & Lee, 2019)
  - Indirect government support for nonprofits through tax exemptions surpasses direct subsidies (Humphreys & Solomon, 2012; Baum & Lee, 2019)

Nonprofit Tax Exemptions: A Submerged State Policy

- Nonprofit sectors have historically benefited from significant tax exemptions
  - The annual federal tax benefit for nonprofits is estimated at $45 billion, making up 2% of total federal tax revenue (Brody & Cordes, 2006)
  - Nonprofit colleges receive an estimated annual tax exemption of $22 billion (Baum & Lee, 2019)
  - Indirect government support for nonprofits through tax exemptions surpasses direct subsidies (Humphreys & Solomon, 2012; Baum & Lee, 2019)
- Tax exemptions represent a form of **Submerged State Policy**
  - It is **invisible** and **unaccountable**

Nonprofit Tax Exemptions: A Submerged State Policy

- Nonprofit sectors have historically benefited from significant tax exemptions
  - The annual federal tax benefit for nonprofits is estimated at $45 billion, making up 2% of total federal tax revenue (Brody & Cordes, 2006)
  - Nonprofit colleges receive an estimated annual tax exemption of $22 billion (Baum & Lee, 2019)
  - Indirect government support for nonprofits through tax exemptions surpasses direct subsidies (Humphreys & Solomon, 2012; Baum & Lee, 2019)
- Tax exemptions represent a form of **Submerged State Policy**
  - It is **invisible** and **unaccountable**
- Scholars argue that nonprofits do not leverage tax benefits to improve their services (Cowan, 2007; Nichols & Santos, 2016; Herring et al., 2018)

Research Questions

- **Question on Submerged State:**

  Who **benefits** from nonprofit tax exemptions?

Research Questions

- **Question on Submerged State:**

  Who **benefits** from nonprofit tax exemptions?

  - Who is **adversely impacted** when the government taxes nonprofits?

Research Questions

- **Question on Submerged State:**

  Who **benefits** from nonprofit tax exemptions?

  - Who is **adversely impacted** when the government taxes nonprofits?

- **Question on Institutional Responses:**

  How do nonprofits respond to government taxation?

Research Questions

- **Question on Submerged State:**

  Who **benefits** from nonprofit tax exemptions?

  - Who is **adversely impacted** when the government taxes nonprofits?

- **Question on Institutional Responses:**

  How do nonprofits respond to government taxation?

  - **Rational Choice Institutionalism:** Actors respond to regulations by seeking to maximize their self-interest (Hall & Taylor, 1996; Peters, 2016)
  - **Sociological Institutionalism:** Actions are shaped by social norms and interactions with other actors (Hall & Taylor, 1996; Page, 2013)

Policy Background:

Net Investment Income Tax on Nonprofit Colleges

Net Investment Income Tax on Nonprofit Colleges

- The 2017 Tax Cuts and Jobs Act (TCJA) imposed a **1.4%** net investment income tax on non-profit colleges with:
  - Enrolling more than 500 tuition-paying students
  - Hold $500,000 or more assets per student

▸ List of Colleges
▸ Choice of Case

Net Investment Income Tax on Nonprofit Colleges

- The 2017 Tax Cuts and Jobs Act (TCJA) imposed a **1.4%** net investment income tax on non-profit colleges with:

▸ Choice of Case

> "The net investment income tax will impede our efforts to help students and improve education...We will each have less to give in aid, less for research, and less to support public engagement."
>
> —*Letters from 48 Colleges to the House*

> "The tax will reduce funds available from the endowment to support financial aid and support for our core academic mission."
>
> —*Stanford University*

> "The provision will constrain the resources that enable us to provide the financial aid that makes college more affordable and accessible."
>
> —*Harvard University*

> "It will reduce MIT's ability to undertake extensive financial aid for students, innovative education, and pioneering research."
>
> —*MIT*

Theoretical Framework and Literature Review

Different Types of Behavioral Responses on Tax

1. **Tax Evasion**: Illegal practice to reduce tax liability
   - e.g., Hiding income
2. **Tax Avoidance**: Utilizes legal loopholes or ambiguous areas of the tax system to reduce tax liability
   - e.g., Research grants vs. honorarium
   - e.g., Adjusting financial metrics to stay below tax thresholds
3. **Tax Shifting**: Shifting the tax burden from one party to another
   - e.g., Businesses increase prices to pass the tax burden onto customers

Theoretical Framework

Perspectives from New Instutionalism

- **Rational Choice Institutionalism**
  - Colleges would choose the approach that best aligns with their self-interest, minimizing costs and maximizing benefits
  - They might choose to **cut** resource investments and spending
- **Sociological Institutionalism**
  - Colleges' behaviors would be shaped by social norms, institutional mission, and interactions with other colleges
    - Nonprofits tend to maximize their public service output instead of self-interest (Brooks, 2005; Chang & Jacobson, 2011)
    - These colleges need to compete with other elite colleges for their academic standing (Bulman, 2022)
  - They might choose to **expand** student enrollment and be more cautious about cutting spending

Data and Sample

Data and Sample

- Data
  - Integrated Postsecondary Education Data System (IPEDS)
  - Form 990 (Tax return of organizations exempt from income tax)
- Sample
  - **Private non-profit colleges** reported in the IPEDS and e-filed Form 990 every year from 2010 to 2023
  - Sample size: 993 Colleges
- Sample Period
  - From 2010 (July 2010 to June 2011) to 2022 (July 2022 to June 2023)

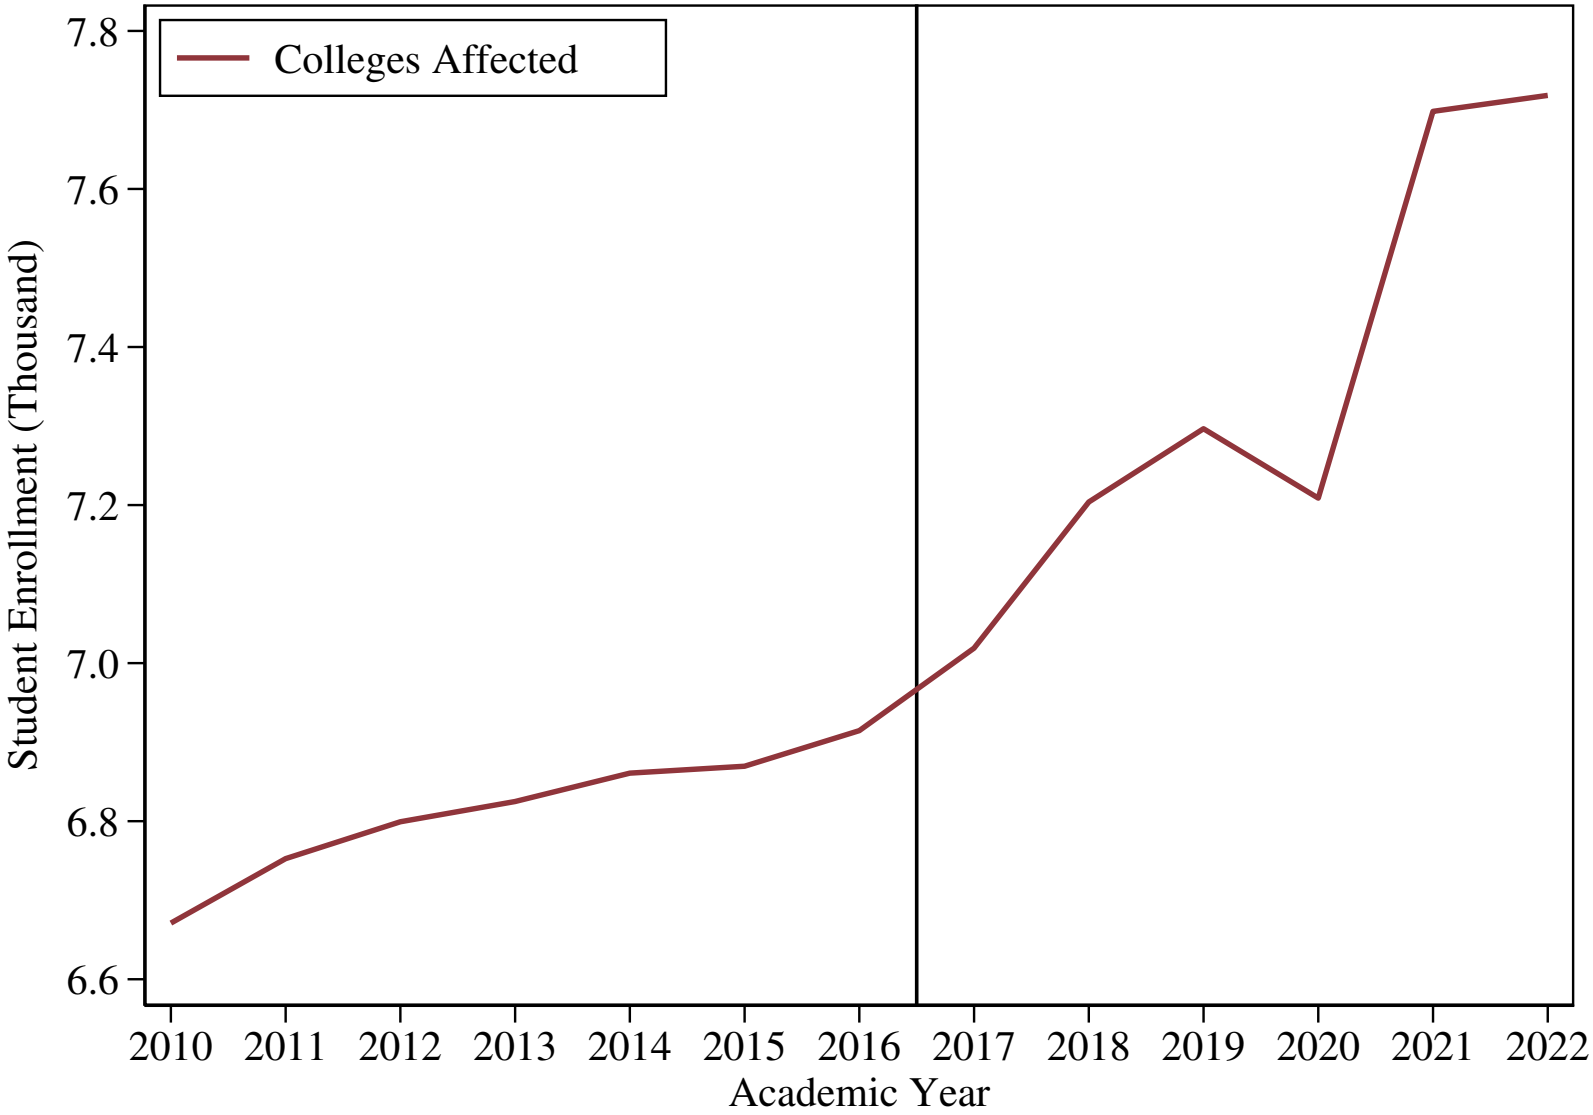
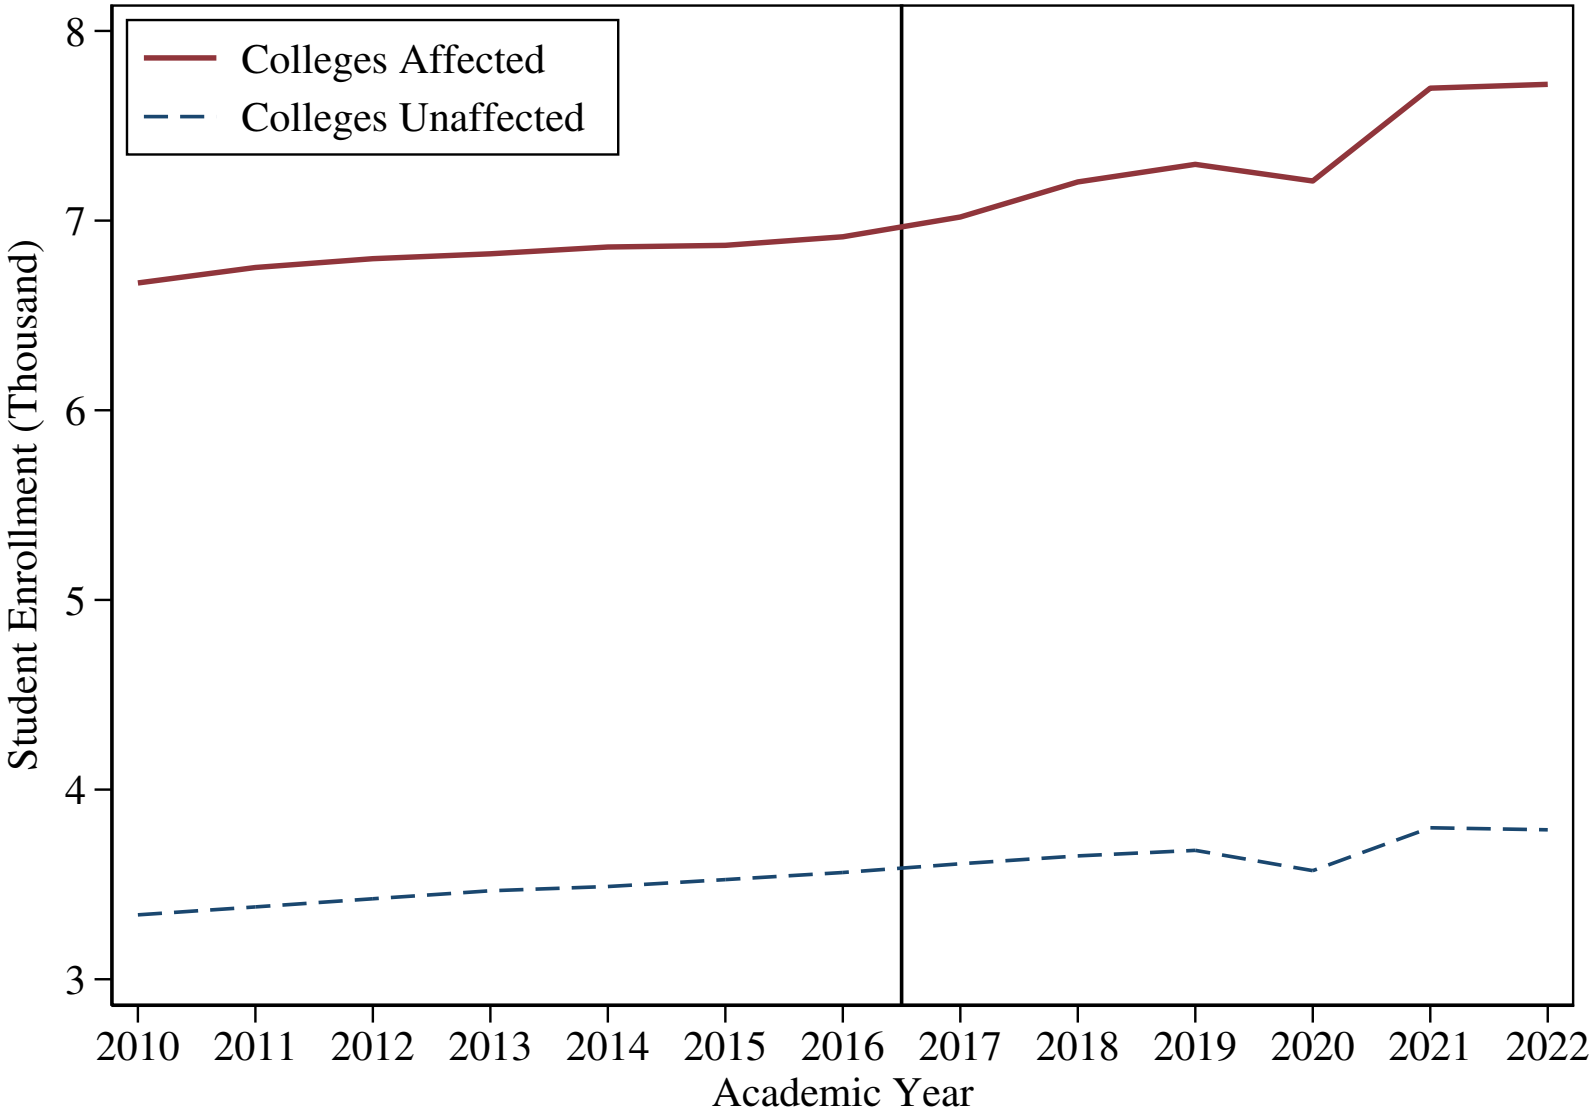
Tax Avoidance

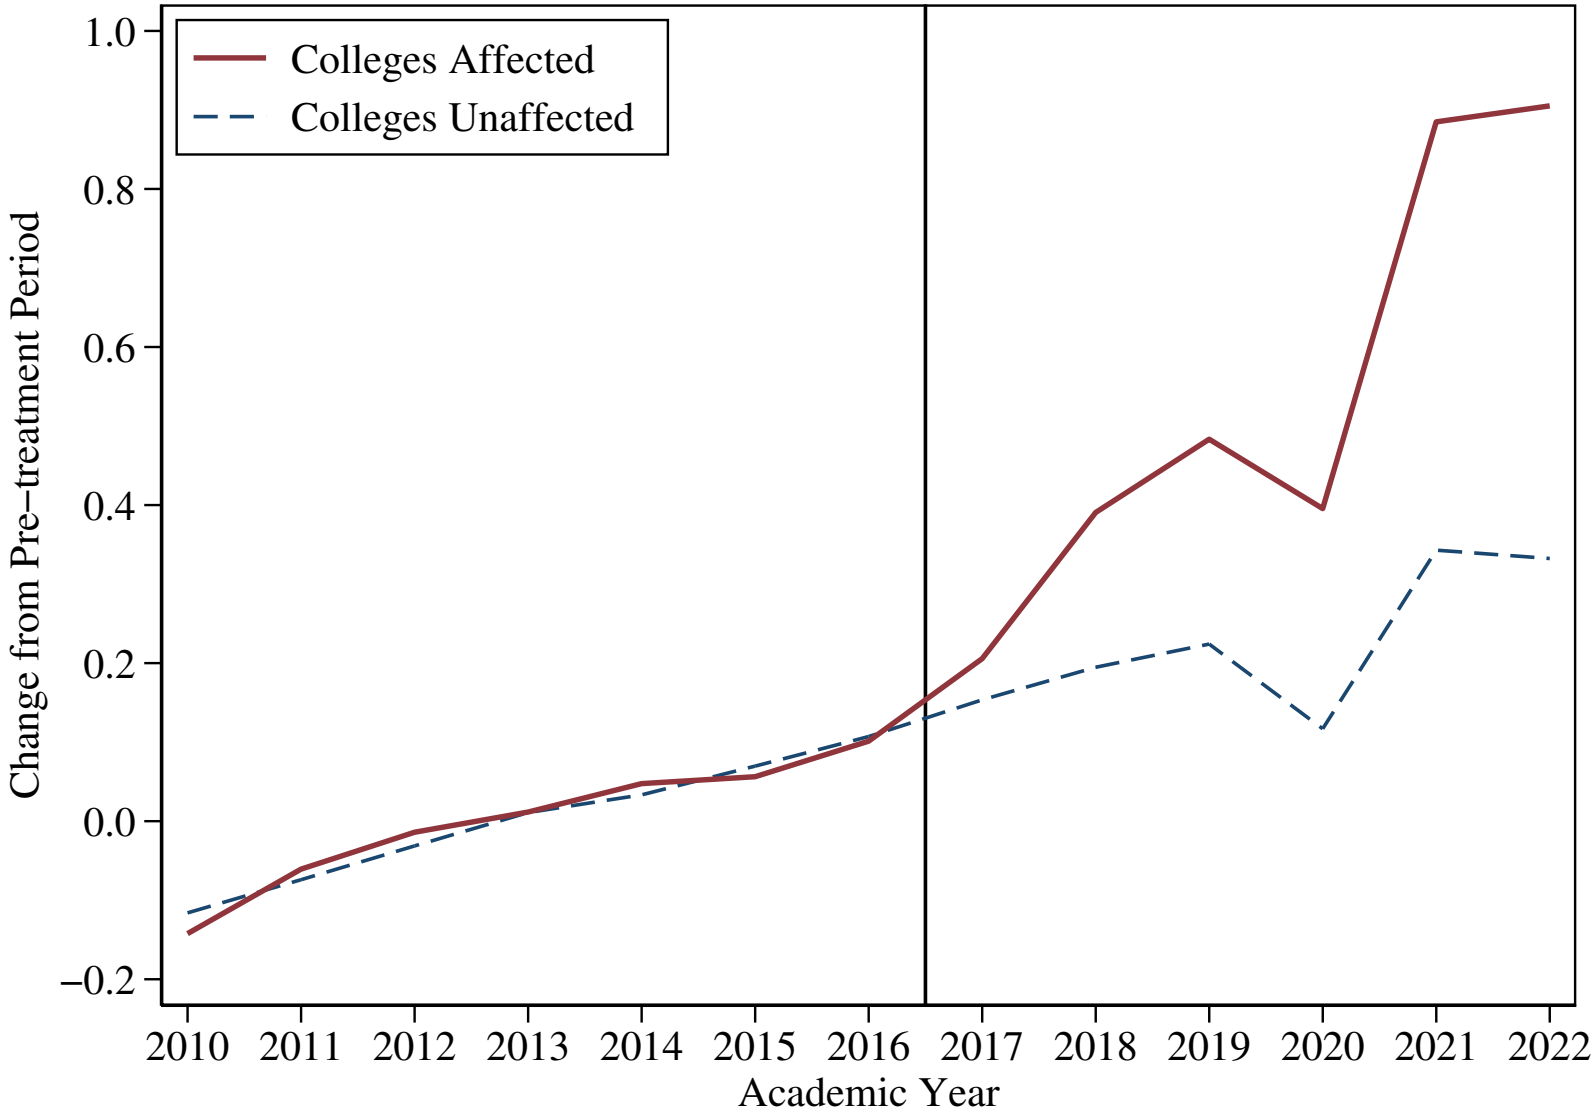
Empirical Strategy: Difference-in-Differences



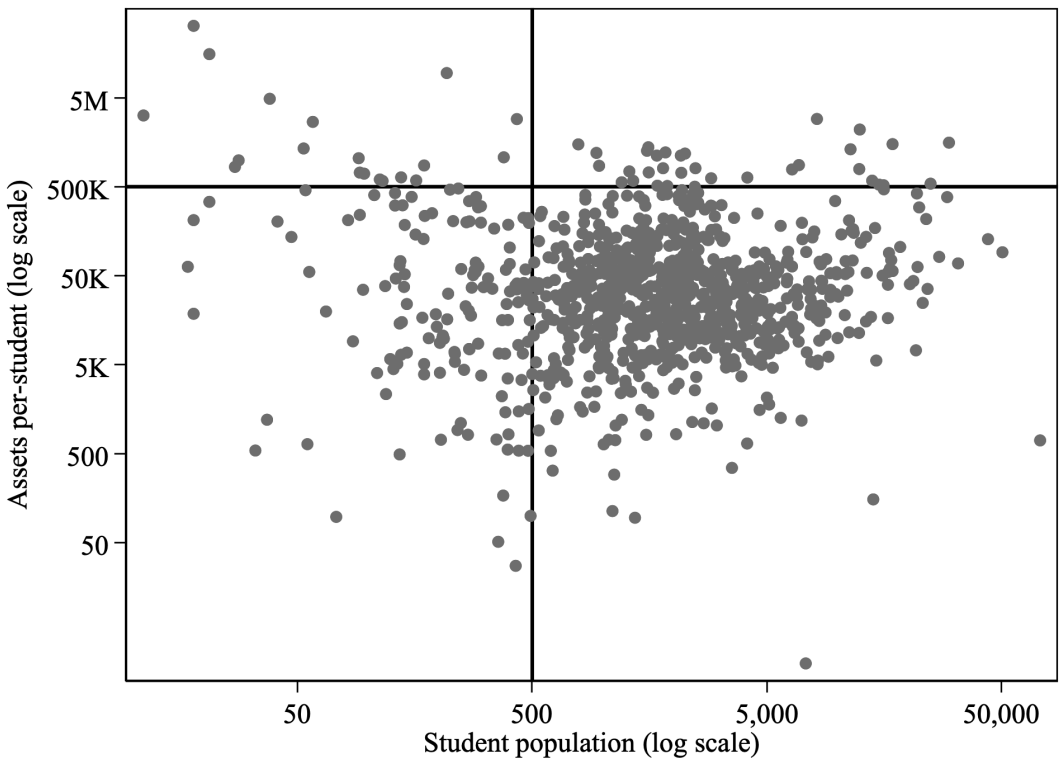
Empirical Strategy: Difference-in-Differences



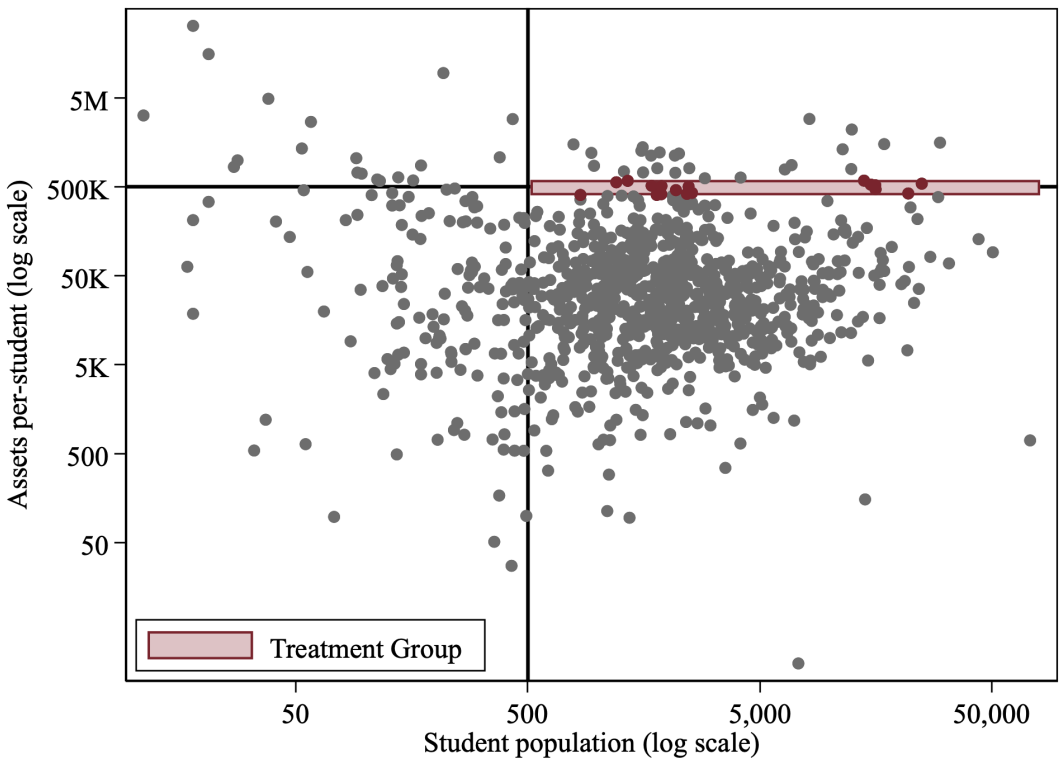
Empirical Strategy: Difference-in-Differences



Tax Avoidance: Treatment and Comparison Groups

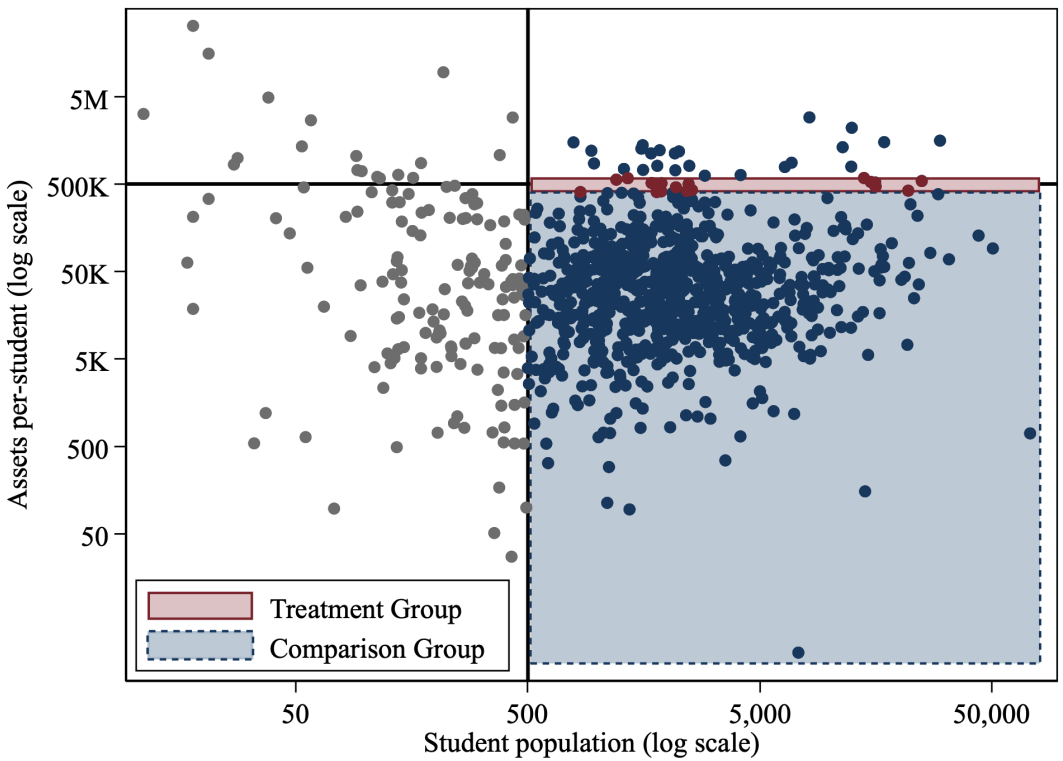


Tax Avoidance: Treatment and Comparison Groups



- **Treatment Group**: Colleges around the tax threshold (with assets per student between \$400,000–\$600,000)
  - **Just above the threshold**: They need only reduce their assets or increase enrollment by 0.05–17% to remain tax-exempt
  - **Just below the threshold**: They would face taxation if their assets grow by 7–24%, but their average annual asset growth rate is 3–6%

Tax Avoidance: Treatment and Comparison Groups



- **Comparison Group**: Colleges far **below** the tax threshold (with assets per student less than $400,000)

Conclusion

Research Findings

- **Tax Avoidance:** Colleges opt to **increase enrollment** rather than ~~**reduce assets**~~
- **Tax Shifting:** Colleges opt to **increase tuition and enrollment** rather than ~~**cut spending**~~
  - Reduces college access for Hispanic and middle-low-income students
  - The total tax paid by these colleges was \$1.621 billion; the total amount shifted (via tuition or other charges) was \$1.435 billion (89%)
- **Policy Implication:**
  - The worst-case scenario of colleges cutting financial aid and spending does not occur
  - Some negative impact on equity, although government revenue exceeds the costs borne by students $\rightarrow$ The government can redistribute tax revenue to those affected

Theory Implications

- Implications for the Submerged State
  - Taxing nonprofits disproportionately impacts underrepresented groups
    $\rightarrow$ Tax exemption might benefit these groups
  - No direct connection between tax payment and college spending
    $\rightarrow$ Tax exemption does not directly boost public service provision
  - Invisible tax exemption vs. visible government revenue (and associated spending)

- Implications for New Institutionalism
  - Nonprofit college responses align more with **Sociological Institutionalism** than **Rational Choice Institutionalism**
  - Institutional behaviors are shaped by norms, mission, and interactions with other actors
    $\rightarrow$ Government can leverage this to design policies that guide organizations to respond positively

Thank You!

Appendix

Table of Contents

Why is This Case Suitable?

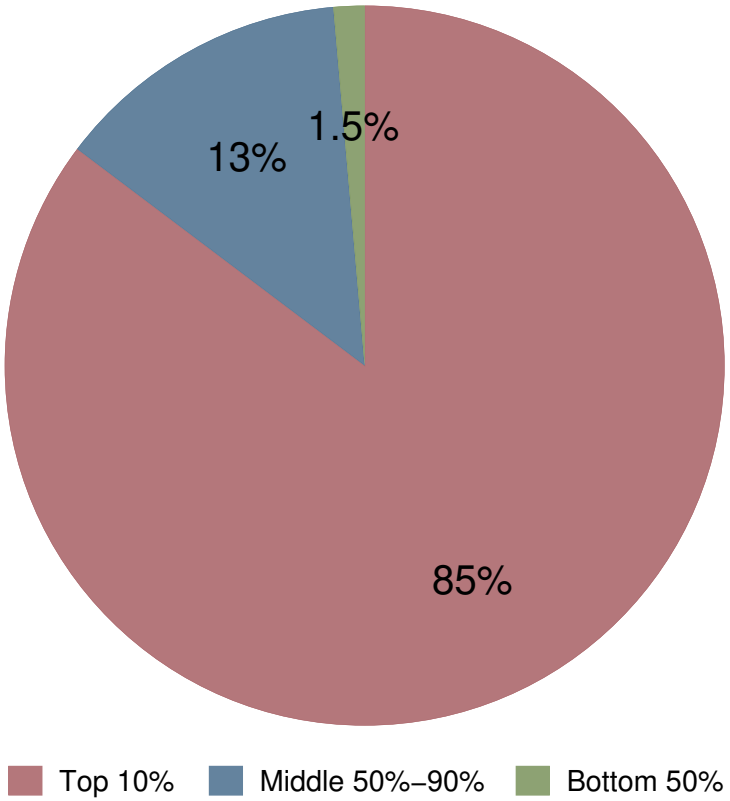
1. Wealth inequality challenges the justification for nonprofit tax exemptions
   - Investment income tax (or any asset-related tax) is a primary consideration for taxing nonprofits
2. Higher education is a significant sector of nonprofits
   - The wealthiest organizations
   - The second-highest revenue and expenditure, only surpassed by hospitals
   - Enjoys the largest share of tax exemptions
3. The specific tax threshold design in this policy allows colleges to respond by changing enrollment or assets
   - Offers an opportunity to examine whether nonprofits, when given a choice, respond in alignment with **self-interest** or **societal benefits**

▸ Policy Background

What's the Problem with the College Endowments?

- A college **endowment** is the assets that generates **interest income** or **capital gains** that used as a funding source (Hinrichs, 2018)

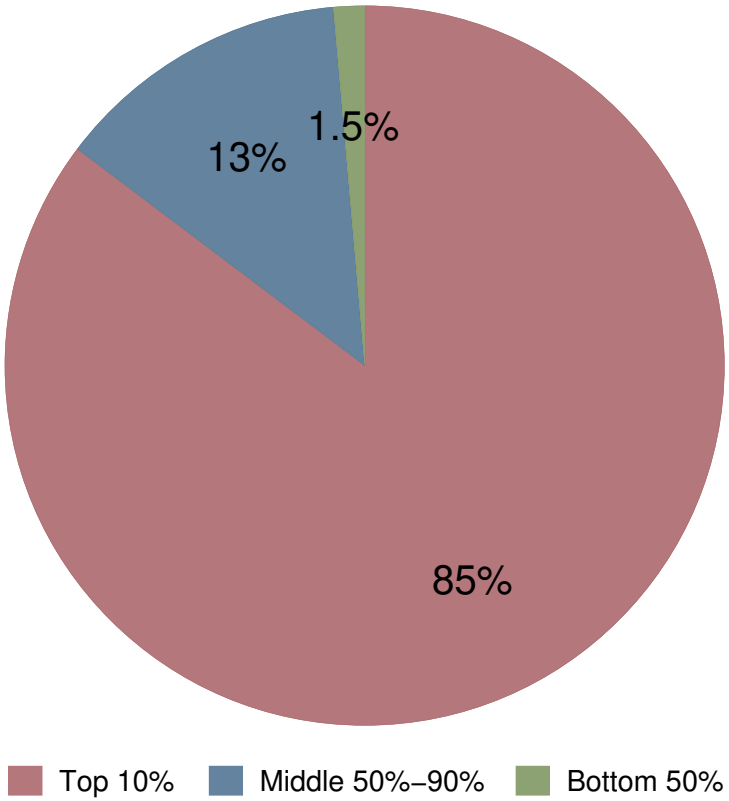
Distribution of College Endowment



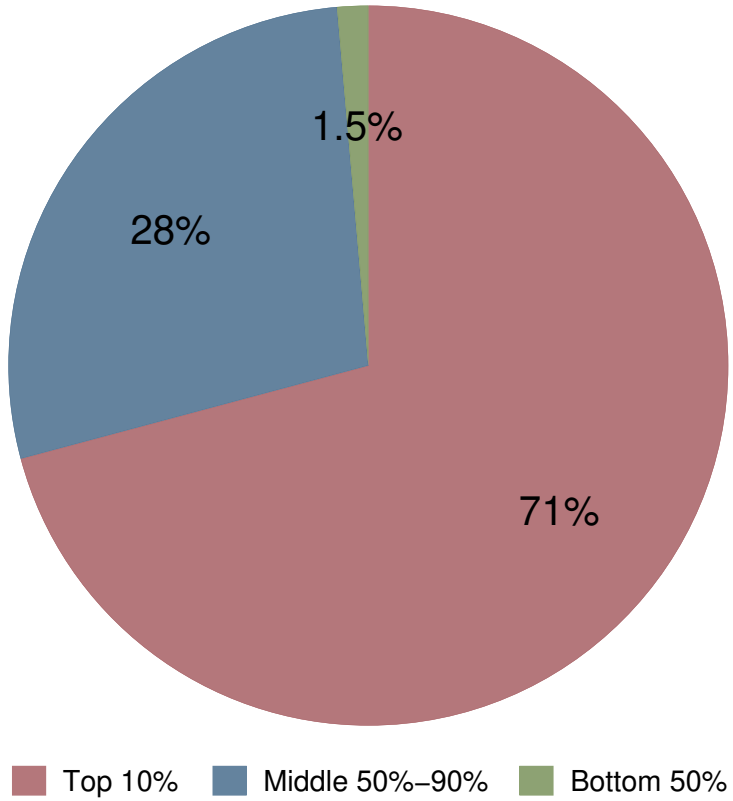
What's the Problem with the College Endowments?

- A college **endowment** is the assets that generates **interest income** or **capital gains** that used as a funding source (Hinrichs, 2018)

Distribution of College Endowment

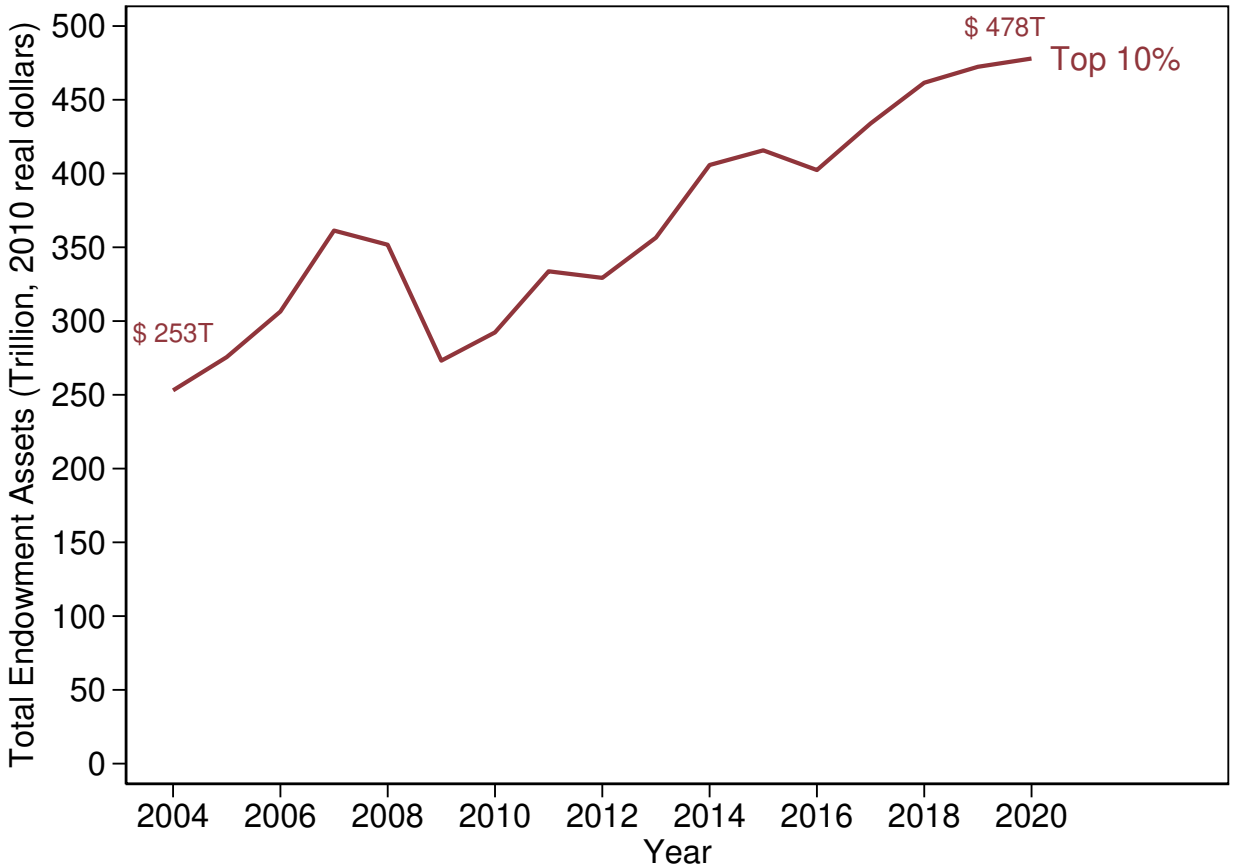


Distribution of Individual Wealth



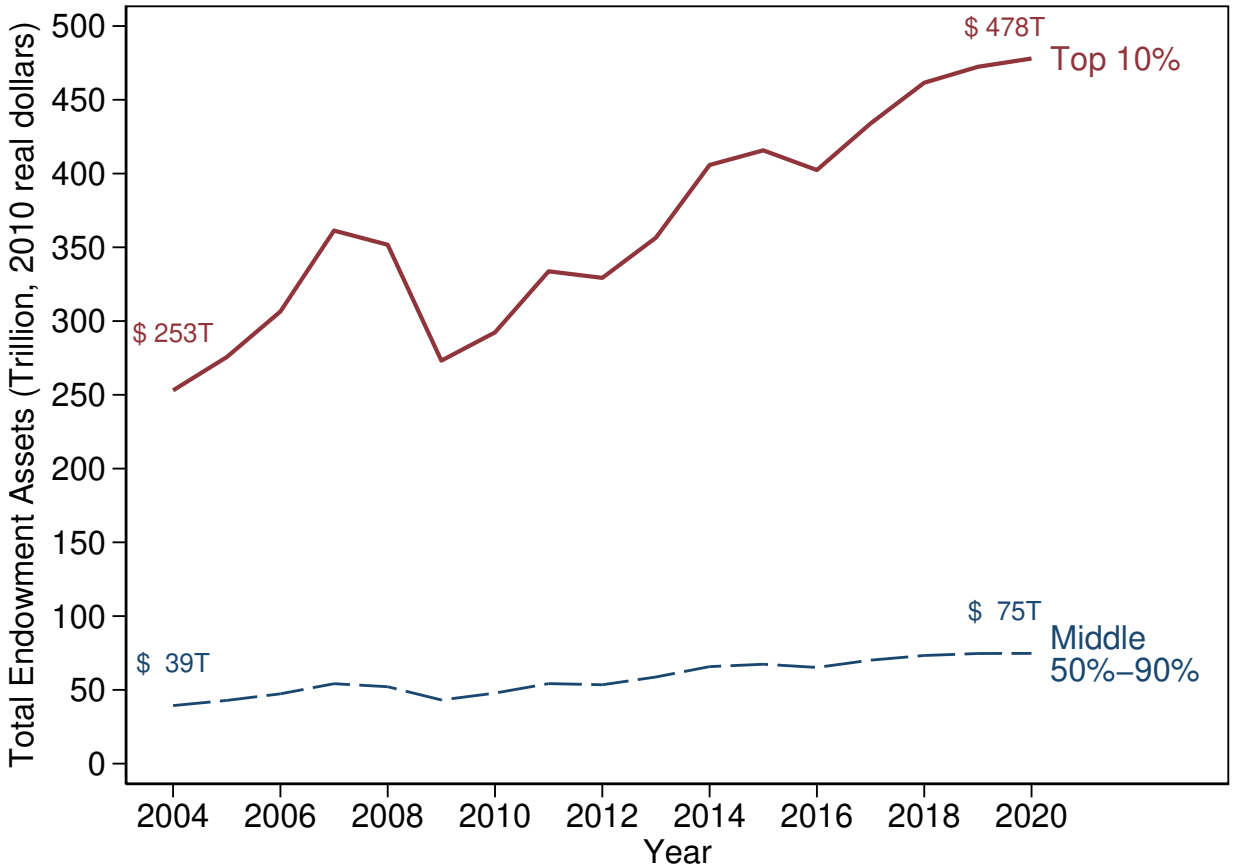
What's the Problem with the College Endowments?

- Colleges tend to use their endowment return to **accumulate wealth** instead of spending on education (Vedder, 2008; Willie, 2012)
  - While the average endowment return rate excesses 10%, colleges spend less than 5% of their endowment (Cowan, 2007; Nichols & Santos, 2016)



What's the Problem with the College Endowments?

- Colleges tend to use their endowment return to **accumulate wealth** instead of spending on education (Vedder, 2008; Willie, 2012)
  - While the average endowment return rate excesses 10%, colleges spend less than 5% of their endowment (Cowan, 2007; Nichols & Santos, 2016)



What's the Problem with the College Endowments?

- Colleges tend to use their endowment return to **accumulate wealth** instead of spending on education (Vedder, 2008; Willie, 2012)

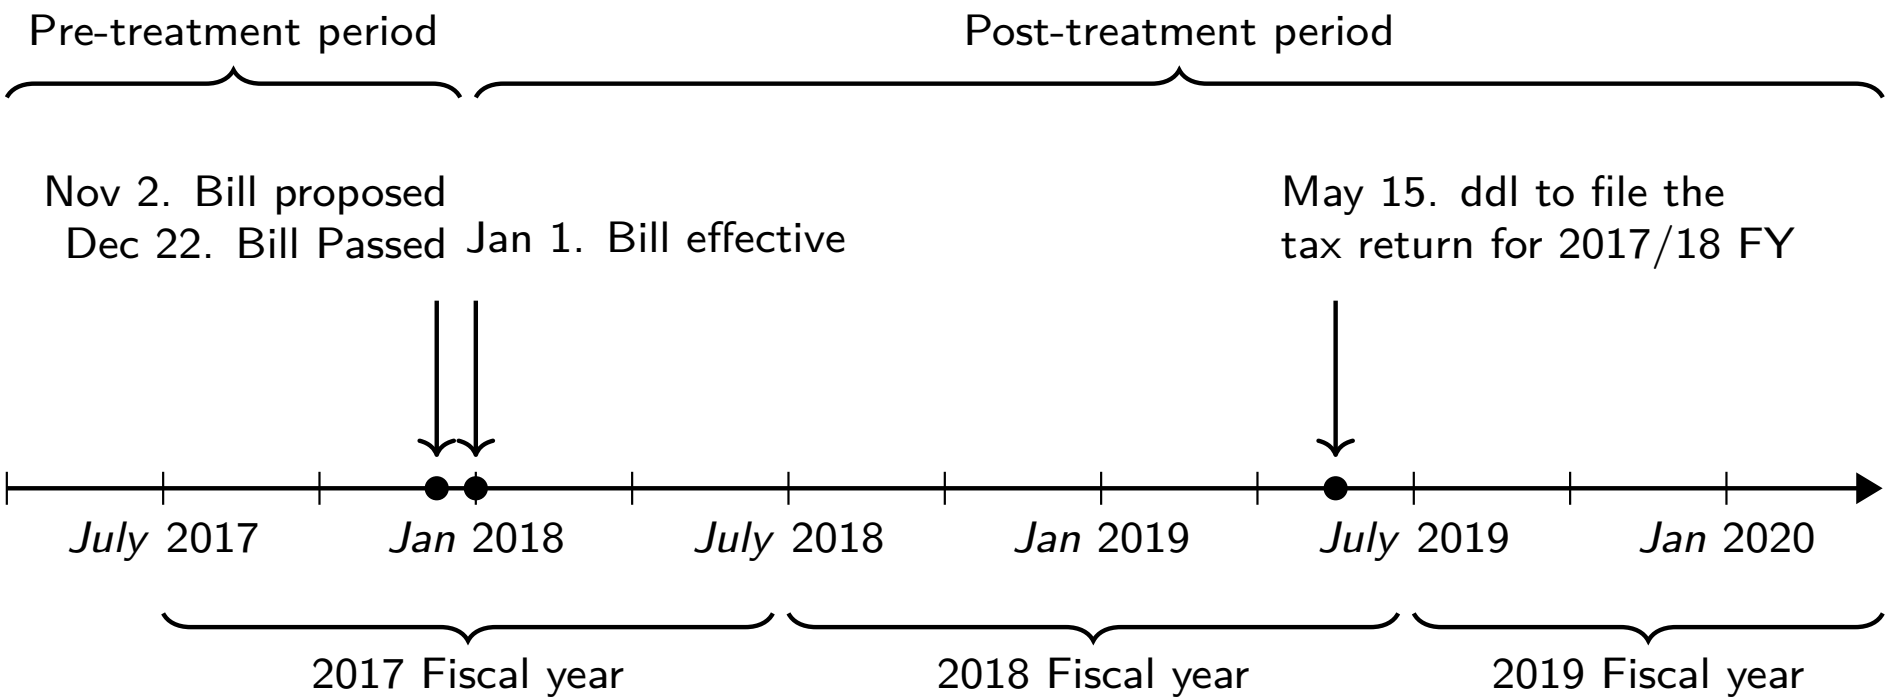
▸ Policy Background

Policy Timeline



- Timeline of the TCJA
  - November 2, 2017: Proposed to the House
    - Targeting colleges with more than $100,000 assets per student
  - November 27, 2017: Sent to the Senate
    - Targeting colleges with more than $250,000 assets per student
  - December 20, 2017: Passed by the Senate
    - Targeting colleges with more than $500,000 assets per student

Related Proposals in the Congress

- **Bill S.3514**: Increasing the tax rate to 35% for colleges with endowments above $10 billion (affecting around 12 institutions)
- **H.R.8883**: Suggests a 10% rate for colleges with per-student endowment assets above $250,000 (affecting over 150 institutions)
- **Bill S.3465**: Proposes a one-time 6% tax on total endowment assets above $9 billion (affecting around 15 institutions)

Nonprofits Taxation Initiative

- Governments at various levels have been considering taxing nonprofits
  - Many local governments have started requesting nonprofits to pay property taxes (Fan et al., 2016)
  - Federal and state governments have begun reviewing the tax-exempt status of some museums and considering taxes on their profit-seeking or tourism-related activities (Halperin, 2015; Fobes, 2016)
  - The federal government has started taxing some colleges on their investment income and eliminated the charitable giving deduction for season tickets for sports (Kisska-Schulze, 2019; Seltzer, 2020)
  - Some legislators have proposed bills to tax nonprofit hospitals (Muoio, 2023). Some state governments have also begun reviewing the tax-exempt status of nonprofit hospitals (Miller & Hawryluk, 2023)

Measurements: Assets

- **IRS' definition**: The aggregate **fair market value** of assets at the end of the preceding taxable year (other than assets used directly in carrying out the institution's exempt purpose)
  - **Fair market value**: The regulations at 53.4942(a)-2(c) allow the organization to use any reasonable method, but require that they use the chosen method consistently
  - **Related Organizations**: Colleges have to take into account assets held by "related organizations"
- **Definition in dataset**: Value of endowment assets at the end of the fiscal year. Consists of gross investments of endowment funds, term endowment funds, and funds functioning as endowment for the institution and any of its foundations and other affiliated organizations.

Measurements: Student Enrollment

- **IRS' definition**: Daily average number of full-time equivalent (FTE) students
  - **Full-time equivalent**: The school should base its counts on the daily average number of full-time students attending the institution, with part-time students being taken into account on a full-time equivalent basis

- **Definition in dataset**:
  - **Full-time student**: Undergraduate: A student enrolled for 12 or more semester (quarter) credits credits. Graduate: A student enrolled for 9 or more semester (quarter) credits or a student involved in thesis or dissertation preparation
  - **Full-time equivalent**: Full-time students $+ \frac{1}{3} \times$ Part-time students
  - **Reporting Timing**: Enrollment as of October 15 or the official fall reporting date of the institution

Measurements: Net Investment Income

- **IRS' definition**: Net investment income = (gross investment income + capital gain net income) – allowable deductions
  - **Gross Investment Income**: Interest, dividends, rents, payments on securities loans, royalties, and similar sources
  - **Allowable deductions** Ordinary and necessary expenses paid/incurred for production or collection of gross investment income, or management, conservation, or maintenance of property held for the production of such income
- **Definition in dataset**: Investment return includes the following:
  - All investment income (i.e., interest, dividends, rents and royalties) /Users/yungyu/Desktop/Screenshot 2024-11-05 at 7.09.22â¯PM.png
  - Gains and losses (realized and unrealized) from holding investments
  - Student loan interest
  - Amounts distributed from irrevocable trusts held by others

Research Agenda

- Education Policy and Inequality
  - **College Access and School Segregation**: How do governments and institutions ensure equitable access to educational opportunities?
  - **Policy Compliance**: How do schools and colleges respond to government policies, and what factors influence their compliance?
  - **Social Mobility**: How does education contribute to intergenerational social mobility and address socioeconomics inequality?
- Policy Implementation
  - **Administrative Burden in Public Service Delivery**: How can policies be designed to reduce barriers to access?
  - **Information Signal**: How do government policy signals unintentionally impact policy outcomes?
- Diversity and Representation
  - **Impact on Service Delivery**: How do diversity and representation in public and education sectors impact service delivery?
  - **Strategy to Enhance**: How do governments and educational institutions use HR tools to enhance organizational diversity and representation?
